ONBOARDING GUIDE

AI Account Manager

A recommend-only AI account manager for paid-media agencies. It handles weekly client reporting, account optimization, creative analysis, and strategy upkeep. Here's what it needs and how it works.

THE OUTPUT

What it does

Weekly client reporting

Pulls the week's ad data, writes a BLUF analysis, and updates your LIVE Slides deck in place, never rebuilding it.

Account optimization

A prioritized scale / cut / fix / test action queue, scored to maximize conversion value under your ROAS floor.

Creative + strategy

Per-second video CV on your Meta creative, a living strategy spine per client, and a daily spend-anomaly monitor.

Recommend-only. It DMs you to review, and never messages a client or changes an ad account unattended.

YOUR INPUTS

What you set up (once)

Required

Claude Code: the runtime that runs the skills
Your own Slides bridge: a tiny Apps Script you deploy (walkthrough included)
A Slack webhook: where it DMs you the BLUF
A client roster entry: copy the commented template

Optional

Google Ads API: account-ops + Google spend
Meta + Triple Whale: Meta spend + blended attribution
Gemini key: creative video analysis
Meta / Shopify / Granola MCP: richer data pulls

doctor.sh shows exactly what's set, and the skill walks you through each gap on first run. Nothing is hardcoded.

INPUTS → SKILL → OUTPUTS

How it works

Your clients' ad data

Google Ads / Meta
Triple Whale (optional)
Your roster config

→

The account manager

Load strategy + memory
Analyze (BLUF / Minto)
Update the live deck

→

Review-ready output

Updated Slides deck
Prioritized action queue
A Slack DM to you

Memory: each client has a living strategy + memory spine the weekly and creative work reads *first*, and writes back to.

CONNECTORS

What it connects to

Claude Code	REQUIRED	The runtime that executes the skills.
Apps Script bridge	REQUIRED	Your own deploy: all Slides/Docs/Sheets output.
Slack webhook	REQUIRED	The only outbound channel: DMs you to review.
Google Ads / Meta	OPTIONAL	Your ad data sources (wire up what you use).
Triple Whale / Gemini	OPTIONAL	Blended attribution + creative video CV.
Meta / Shopify / Granola	MCP	Per-user MCP connections for richer pulls.

TWO CHOICES, BOTH SIMPLE

Running it

On demand · or · Scheduled

Run a client by hand ("build the weekly deck for acme"), or wire the weekly cycle to a local schedule.

Reporting · or · Full cycle

Just the weekly deck, or the full orchestrated cycle: context to checks to data to analysis to deck to memory to DM.

Start in one line: open Claude Code in the package folder and say "set up the AI Account Manager and walk me through it."

WHAT IT WILL AND WON'T DO

Safe by design

Recommend-only

DMs you to review. Never messages a client or changes an ad account unattended.

Additive decks

Prepends to the live reporting deck; never wipes-and-rebuilds your edits.

Build-your-own-infra

Runs on YOUR bridge, YOUR roster, YOUR keys. No dependency on anyone else's accounts.

Honest about causation

Creative analysis is correlational; causal claims need experiments, and it says so.
